WWW.BLUETIGERUSA.COM

Thank You!

Thanks for purchasing a Blue Tiger Pro Bluetooth headset. Please double check the contents of your package to verify that you have received all of the included items. Please read the user guide in its entirety before operating your headset. Your Blue Tiger headset can be paired with any device that is Bluetooth enabled.

Getting Started – Battery Care

Please fully charge your new headset before attempting to pair your headset for the first time. Your headset should be charged for a minimum of four hours and no more than eight hours to achieve a full charge. The LED will remain solid red while charging, and will turn off when fully charged.

BLUE TIGER PRO OVERVIEW

Specifications

Bluetooth Type	V 2.1, Class 2
Frequency Band	2.4GHz-2.8435GHz, ISM Band
Talk/Standby Time	20 hours/350 hours
Data Encryption	128 bit
Battery Type	High Capacity Li-Polymer
Charging Type	USB
Weight	75g (includes battery)
Size	150*140*65mm

FIRST TIME USAGE INSTRUCTIONS

Adjusting the Headband: We recommend that you extend the headband slightly on both sides to reduce tension and increase the headband's flexibility.

Pairing the Headset: Before your headset can be used with your phone, it must first be connected, or paired, to

your phone. This process should only need to be completed one time with each new device.

Instructions for Single Device Pairing:

1. Make sure that your Blue Tiger headset is in the "Off" position (no light flashing on the side of the headset), press and hold the MFB for about 10 seconds, until the LED light begins alternating between red and blue flashes.

2. On your phone or other Bluetooth device, go to your Bluetooth menu (sometimes located under Settings, Wireless, Connectivity, or another submenu), and select "Add New" or "Search for New Devices."
3. On your phone or other Bluetooth device, select your headset on the list. Your device may ask for a passcode. If so, input "0000."
4. On your phone or other Bluetooth device, select "Connect" or "Automatically Connect."

Having Trouble?: *If your phone does not “see” your headset, check to make sure the LED light on the headset is flashing blue and red. Once you have verified that it is flashing and your phone is not recognizing the headset, try rebooting your phone and attempt pairing again.*

Instructions for Pairing to a Second Device (Multi-point):

1. Pair the headset as normal with the first phone.

2. Turn the Bluetooth function off on the first phone.
3. Turn the headset off and then pair the headset with the second phone.
4. Turn the Bluetooth function back on the first phone.

At this time, both phones should be paired with the headset. For functions such as voice dial and redial, the headset will automatically connect to whichever phone it had the most recent active connection with.

General Functions

Turn On: Press and hold the MFB button for 5 seconds until the indicator light flashes blue 3 times.

NOTE: For the first 5 cycles of turning on the headset, the headset will beep twice, flash blue 5 times, and then two more times.

Turn Off: Press and hold the MFB for 5 seconds. The headset will beep three times and then the indicator light will flash red three times.

Voice Dialing: Press and hold the MFB for about one second. Your phone should then activate its voice dialing function. This process may vary slightly based on your particular phone model.

Redialing: Press the MFB twice quickly.

Answering/Ending a Call: Press the MFB once.

Mute On/Off: Press and hold the Down Volume (-) button for 2-3 seconds.

*NOTE: Some functions may or may not work with certain phone models.
See your phone's manual for more information.*

Bluetooth Tips

Most Bluetooth headsets, including Blue Tiger headsets, have a range of about 10 meters (about 30 feet).

However, there are factors that can increase or decrease your range and signal strength.

Like most radio transmissions, line of sight plays an important role. If your headset has a clear line of sight to your phone, you may be able to go beyond the 30 meter

mark. On the other hand, if you do not have good line of sight or have something like a wall between the headset and phone, you may only get a few feet of range.

Additionally, other factors may interfere with Bluetooth signal transmission. Other devices emitting radio waves, minor non-harmful radiation from every day electronic devices, or even the magnetic field around one's body may at times cause interference. The best way to avoid

this is to remove your phone or other Bluetooth device from contact or close proximity to the source of the interference.

Troubleshooting Tips

*Ensure that your headset has enough power, is turned on, and has been successfully paired with your device.
(Follow the pairing instructions located in this manual)

*If you are having trouble getting the headset paired, try rebooting your phone.

*Ensure that you have enabled your Bluetooth function on your phone or device.

*Be sure that you are within 10 meters (about 30 feet) of your phone or Bluetooth enabled device with good line of sight and with no other electromagnetic interferences obstructing your wireless link.

*If the indicator light on your headset is flashing red, your battery is running low.

*If indicator light goes off during charging, do not be alarmed, headset is still receiving a charge.

Headset Storage

*Only use included accessories with your Blue Tiger Pro. Using unauthorized chargers could damage your battery.

*Store headset away from dust, heat, and water.

*Do not store headset or chargers in extreme environments.

Additional Support

If you have any other questions or for information about your headset warranty, please contact our Customer Service department at 1-800-935-1165, see our technical support page on our website, bluetigerusa.com/technical-support.
